

The Bubble Chart Tab

When you have completed filling the different assets and threats on the Prob-Impact tab, click on the “Bubble Chart” tab to see the Bubble Chart.

This chart provides an image of each Loss Event or Threat as a bubble. Each loss event you entered is represented by a bubble identified by the number on the horizontal side of the chart.

Each bubble is located on a base line which is either High, Medium or Low probability running horizontally through the chart.

The size of each bubble represents the impact of the loss event if it were to occur. The Large bubbles are High Impact, the Medium bubbles are Medium Impact and the Small bubbles are Low Impact.
